3. New Features in This Release	5

1. Welcome

Welcome to the release notes for the Privitar Data Privacy Platform. This document describes:

- [Product Documentation](#)
- [New Features in This Release](#)

2. Product Documentation

To learn more about all the features discussed in these release notes, please refer to the product documentation at <https://docs.privitar.com>.

3. New Features in This Release

Masking Rule Types

The internal regular expression tester now tests for length rather than complexity.

By default there is a 1,000-character maximum on regular expressions.

Security Library Updates

We updated several libraries to resolve any critical or high vulnerabilities reported by Snyk.

Some notable updated libraries include:

- Spring Boot to version 2.7.9, which bundles Apache Tomcat 9.0.71
- Replaced Apache Log4j with Reload4j version 1.7.36

NOVLT Tokenization

This release includes improved performance for NOVLT tokenization.

Third-Party Compatibility

We added support for the following versions:

- Apache NiFi versions up to 1.20.0
- Apache Tomcat versions up to 9.0.71
